

AMENDMENTS TO THE SPECIFICATION

Please amend the specifications as follows.

Please replace the paragraph on page 13 beginning with “Figure 3 illustrates...” with:

-- Figure 3 illustrates an embodiment of the present invention. Decision blocks 300 and 320 determine the subject of an instantiation request. This request is any keyword whose effect is the instantiation of an object-type in the language. An example of an instantiation request in prior art languages is the new keyword in Java and C++. Thus, decision block 300 determines whether a class instantiation request has been made. If no, then decision block 320 determines whether a function instantiation request has been made. If not, then in decision block 321 a line of inquiry continues until the instantiation request possibilities have been exhausted. --
